# Big Dutchman®

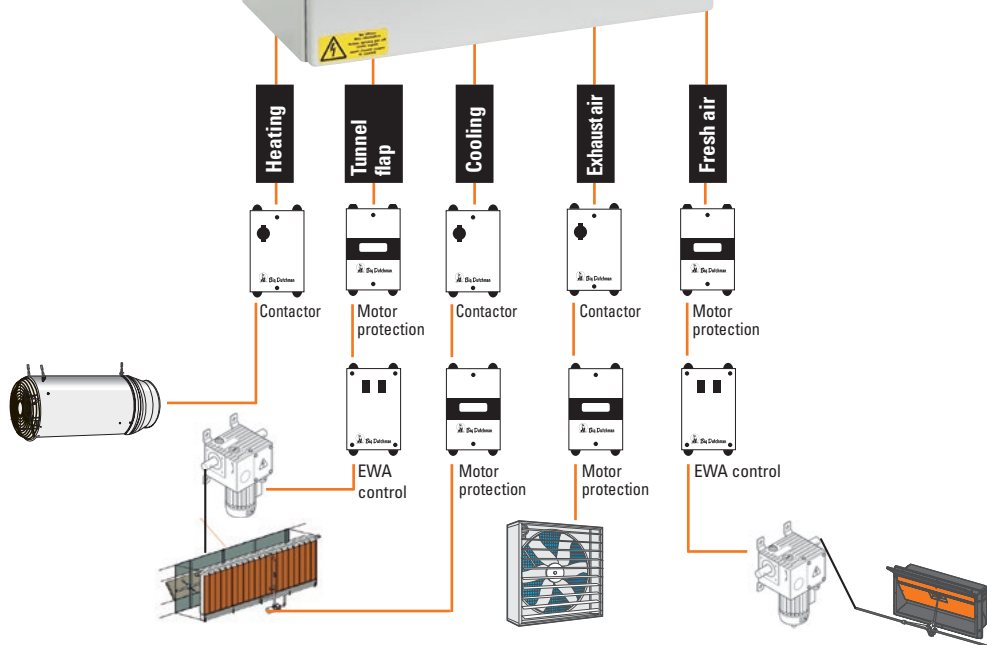

## Vento

– the climate computer for small poultry houses in hot climates –

**Vento** is a climate computer developed by Big Dutchman. One of the main characteristics is its very easy and clear functioning. The computer is also

incredibly simple to install and to put into operation. Fresh air and exhaust air, heating and cooling are controlled reliably. Vento is ideally suited for use in

broiler, layer and breeder houses located in hot-climate areas.

### Advantages

- ✓ Vento is the ideal climate computer to start automated poultry production → improved house climate and therefore better performance by the birds;
- ✓ simple to install and to put into operation even without training;
- ✓ fresh and exhaust air can be controlled as side or tunnel ventilation;
- ✓ modular concept → only the required number of fan steps is installed, up to ten steps are possible;
- ✓ modular design → no control cabinet is needed, the individual modules can be used as required;
- ✓ automatic data backup always occurs at midnight;
- ✓ overload protection against lightning damage.
